SUMMARY

Backend-focused Software Engineer with hands-on experience building scalable reporting systems, automated data pipelines, and client-facing backend services using Java (Spring Boot) on large-scale (50M+ record) production databases. Experienced in query optimization, telecom system integration, and direct client collaboration. Strong problem-solving mindset and ability to quickly adapt to new technologies.

SKILLS

Languages: Java, JavaScript

Frontend: React.js, JSP, HTML5, CSS3

Backend: Spring Boot, REST APIs, Servlets, Cron-based Job Scheduling

Databases: MySQL, MariaDB, PostgreSQL (query optimization, indexing at scale, large-table performance tuning)

Concepts: Multithreading, Producer-Consumer, Microservices, API Design, System Failover Design, Unit Testing, Code Review

Tools: Git, Docker (basic), Maven, Postman, Tomcat, FreeSWITCH (SS7 telephony integration)

EXPERIENCE

Software Engineer — Telemune

Feb 2026 – Present

Mohali, India

- Automated monthly revenue reporting for international telecom clients using Spring Boot and cron-scheduled jobs, replacing a manual 3–4 day process (data extraction, currency conversion, revenue-share calculation, finance verification) with report generation completed in under 5 minutes
- Built and deployed a daily customer analytics reporting system on a client-facing web portal (Java/JSP) processing 50M+ subscriber records across USSD, SMS, IVR, and Web interfaces — 4 report sheets, 30+ columns, generated in ~7 minutes and available by midnight, down from a delayed manual process
- Optimized MySQL/MariaDB queries and indexing strategy to support full-table-scan analytics on 50M+ row production tables without locking or degrading live system performance
- Led client-facing testbed configuration and go-live for a subscriber ID migration (7-to-9-digit MSISDN), re-routing IVR, USSD, SMS, and Web interfaces across interconnected services and working directly with the client to resolve testing issues through successful production rollout
- Built a missed-call-triggered subscription feature (FreeSWITCH/SS7 call interception with Spring Boot APIs) and a failover mechanism for multi-HLR setups; resolved production issues via log tracing and code-level fixes on a legacy platform

Web Development Trainee — Path Coders Pvt. Ltd.

Jan 2024 – Mar 2024

Mohali, India

- Built and integrated React.js frontends with backend APIs, including authentication and CRUD workflows, using Git and Postman for version control and API testing

PROJECTS

AI-Powered Resource Platform (Microservices)

- Designed microservices architecture using Spring Cloud Gateway for routing and authentication
- Integrated AI features including summarization, quizzes, and chat using external APIs
- Built scalable backend services handling structured and unstructured learning resources

EDUCATION

B.Tech Computer Science Engineering

University Institute of Technology, Shimla

2021 – 2025

CGPA: 8.84 / 10
